Report Overview

The market for used beverage cans (UBCs) is a critical segment of the global recycling industry, driven by the demand for aluminum scrap as a raw material for manufacturing new products. UBCs are primarily collected through recycling programs, scrap dealers, and municipal waste systems, then processed and melted down to produce secondary aluminum, which is energy-efficient compared to primary aluminum production. The market is influenced by aluminum prices, environmental regulations promoting recycling, and consumer participation in recycling initiatives. Key players include metal recyclers, beverage companies with sustainability commitments, and scrap trading firms. Growth is supported by increasing awareness of circular economy principles, government incentives for recycling, and the beverage industry's shift toward sustainable packaging. Challenges include contamination of scrap, inconsistent collection rates, and fluctuating commodity prices. Regions with strong recycling infrastructure, such as North America and Europe, dominate the market, while emerging economies are gradually improving collection systems to tap into this opportunity. The UBC market remains closely tied to broader aluminum industry trends and sustainability goals.

The global Used Beverage Cans market size was estimated at USD 11012.1 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
