## Abstracts

Utility Flares are employed in applications which do not require smokeless burning or where smokeless flaring can be achieved without the use of an additional assist medium. They do not require auxiliary gas streams such as steam or air, two fluids normally used to improve smokeless capacity. They include a Dynamic Seal in the base of the tip to reduce purge gas cost and prevent flashback. Also, a stainless steel flame retention ring is designed to prevent flame lift off.

The global Utility Flare market size was estimated at USD 558.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
