Abstracts

An ultraviolet absorber or UV absorber is a material that is used to dissipate ultraviolet light into a lower energy state. They are typically used to protect polymers by preventing the harmful ultraviolet light from degrading the polymer. Ultraviolet absorbers have many different material compositions, including: Benzotriazole is a common ultraviolet absorber for polyvinyl chloride (PVC). Cyanoacrylate is a common absorber for adhesives. Benzophenone is commonly used as an ultraviolet absorber for many different types of plastics. There is a difference between ultraviolet absorbers and hindered amine light stabilizers. Hindered amine light stabilizers "hinder" the negative effects that ultraviolet light can have on a material, whereas ultraviolet absorbers actually absorb the ultraviolet light and release the energy in the form of heat.

The global UV Absorbers market size was estimated at USD 943.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
