## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on UV Board and Roll-to-Roll Integrated Printer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. UV Board and Roll-to-Roll Integrated Printer are composite devices that integrate roll-to-roll and roll-to-sheet printing capabilities. Through a conveyor belt system combined with a flatbed platform, they enable compatible printing of both flexible materials (such as backlit film and soft film) and rigid materials (such as acrylic and metal). Their core advantage lies in their versatility, reducing customer equipment procurement costs and space requirements. In 2024, global sales of UV roll-to-roll printers reached 30,000 units, with an average selling price of \$6,000 per unit. The production capacity of UV Board and Roll-to-Roll Integrated Printer is approximately 40,000 units, with an industry gross profit margin of approximately 25-40%. The upstream of the industry chain includes suppliers of raw materials such as electronic components, engineering plastics, and UV inks; the midstream consists of equipment manufacturers responsible for the research and development and production of complete machines; and the downstream reaches customers in advertising, packaging, and industrial manufacturing through distributors, agents, and e-commerce platforms.
