Report Overview:

UV (ultraviolet) curable ink is a kind of inks, with ultraviolet light from different wavelengths and energy to make ink monomer polymerization into polymers in the connection of material, make the ink film and drying.

UV curable inks speed up the printing process by reducing the drying time while facilitating superior bonding. UV curable inks do not employ the use of environmentally harmful solvents, additionally; they do not cause loss of coating thickness and volume loss in final prints. This causes a reduction in waste, pollutant emissions and energy use.
