Report Overview

UV Laser Printer belongs to a series of products of laser marking machine, but it is developed with 355nm ultraviolet laser. Compared with infrared laser, the machine adopts third-order intracavity frequency doubling technology. To a large extent, the mechanical deformation of the material is reduced and the thermal influence of processing is small, because it is mainly used for ultra-fine marking and engraving, especially suitable for food, medical packaging material marking, micro-hole drilling, high-speed division of glass materials and silicon wafers for complex pattern cutting and other applications.

The global UV Laser Printers market size was estimated at USD 164.50 million in 2023 and is projected to reach USD 244.10 million by 2030, exhibiting a CAGR of 5.80% during the forecast period.

North America UV Laser Printers market size was USD 42.86 million in 2023, at a CAGR of 4.97% during the forecast period of 2024 through 2030.
