Abstracts

Ultraviolet (UV) LED spot light sources are solid-state lighting devices that emit ultraviolet radiation in specific wavelength ranges?primarily UVA (315?400 nm), UVB (280?315 nm), or UVC (100?280 nm)?using light-emitting diodes (LEDs) to deliver focused, high-intensity illumination for targeted applications. These compact, energy-efficient sources are engineered to provide precise optical control, directional output, and instant on/off functionality with minimal heat generation, making them suitable for uses requiring localized UV exposure such as curing adhesives and coatings, disinfection of surfaces and air, forensic analysis, counterfeit detection, and medical or scientific instrumentation. Unlike traditional UV lamps (e.g., mercury vapor), UV LED spot lights offer longer operational lifetimes, reduced power consumption, and are free of hazardous materials, aligning with environmental regulations and enabling integration into portable, automated, or safety-sensitive systems.

The global Uv Led Spot Light Source market size was estimated at USD 125.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
