Abstracts

Ultraviolet ozone cleaners (UVOCs) are advanced air and surface purification devices that utilize short-wavelength ultraviolet (UV-C) light to generate ozone (O?) from atmospheric oxygen, leveraging the potent oxidizing properties of ozone to neutralize airborne pathogens, volatile organic compounds (VOCs), and persistent odors by breaking down their molecular structures. These systems are engineered for applications requiring high-level disinfection in environments where chemical residues are undesirable, such as medical facilities, laboratories, food processing areas, and residential settings concerned with indoor air quality. The technology combines germicidal UV irradiation?which directly damages microbial DNA?with ozone?s gaseous diffusion capabilities, enabling comprehensive decontamination of both exposed surfaces and ambient air, even in shadowed or hard-to-reach areas where light may not penetrate directly.

The global Uv Ozone Cleaner (Uvoc) market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
