### Report Overview

Ultraviolet–visible spectroscopy or ultraviolet-visible spectrophotometry (UV-Vis or UV/Vis) refers to absorption spectroscopy or reflectance spectroscopy in the ultraviolet-visible spectral region. This means it uses light in the visible and adjacent (near-UV and near-infrared [NIR]) ranges. The absorption or reflectance in the visible range directly affects the perceived color of the chemicals involved. In this region of the electromagnetic spectrum, atoms and molecules undergo electronic transitions.

Absorption spectroscopy is complementary to fluorescence spectroscopy, in that fluorescence deals with transitions from the excited state to the ground state, while absorption measures transitions from the ground state to the excited state.

Global UV-Vis Spectrometer key players include Agilent Technologies, Eppendorf, Thermo Fisher Scientific, Danaher, Shimadzu Corporation, etc. Global top five manufacturers hold a share over 25%.

Europe is the largest market, with a share about 25%, followed by China, and North America, both have a share about 40 percent.

In terms of product, Single-Beam is the largest segment, with a share nearly 70%. And in terms of application, the largest application is Academic Research Institutes, followed by Environmental, Life Sciences R&D, etc.
