Abstracts

UV wood coating is a type of coating that utilizes ultraviolet (UV) light curing technology and is commonly used for decoration and protection of wood surfaces. The characteristic of this coating is that it can be hardened by ultraviolet light in a short period of time, forming a hard coating. It has the advantages of fast drying, environmental protection, wear resistance, corrosion resistance, etc. UV wood coatings are generally used on the surface of wooden products such as furniture, wooden doors, floors, and veneers, which can provide better durability, scratch resistance, and maintain the natural texture of the wood. Compared to traditional solvent based or water-based wood coatings, UV coatings typically do not contain volatile organic compounds (VOCs), making them more environmentally friendly.

The global UV Wood Coatings market size was estimated at USD 1359.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
