Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on UVC Excimer Light Source competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global UVC Excimer Light Source production reached approximately 218,000 units, with an average global market price of around US\$ 350 per unit. UVC Excimer Light Source is a specialized ultraviolet (UV) light-emitting device that generates germicidal radiation in the UVC spectrum (typically at 222 nm, known as far-UVC, or 172 nm/282 nm depending on the excimer gas). It operates based on excimer (excited dimer) technology, where noble gas or noble gas–halogen mixtures form short-lived excited molecules that release UVC photons when returning to their ground state. Unlike traditional mercury-based UV lamps, excimer lamps are mercury-free, instant-on, and environmentally friendly, making them highly suitable for disinfection and surface treatment applications.

The global UVC Excimer Light Source market size was estimated at USD 76.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.90% during the forecast period.
