Report Overview

Uvea is found in the back of the sclera and the cornea and has three parts: the iris, the ciliary body and the choroid. Uveal melanoma, including the iris choroid and cilira body, is referred to as cancer of the areas of the skin. This is the state in which the tumors emerge from the melanocytes that are responsible for the color of the eye inside the uva.

It is the most common form of intraocular malignancy in adults, although it is an uncommon disorder. The treatment of uveal melanoma depends on the size of the tumor, which is the most significant factor. In the early stages, this kind of melanoma is completely asymptomatic. Some modifications can be observed in tumor enlargement over time, such as pupil distortion, reduced visibility due to blurred vision, and secondary retinal detachment.
