### Report Overview

EEPROM (electrically erasable programmable read-only memory) is user-modifiable read-only memory (ROM) that can be erased and reprogrammed (written to) repeatedly through the application of higher than normal electrical voltage. Unlike EPROM chips, EEPROMs do not need to be removed from the computer to be modified. However, an EEPROM chip has to be erased and reprogrammed in its entirety, not selectively. It also has a limited life - that is, the number of times it can be reprogrammed is limited to tens or hundreds of thousands of times. In an EEPROM that is frequently reprogrammed while the computer is in use, the life of the EEPROM can be an important design consideration. The report focuses on Serial EEPROM 1Mbit.

The global 1Mbit Serial EEPROM market size was estimated at USD 749 million in 2023 and is projected to reach USD 1276.20 million by 2032, exhibiting a CAGR of 6.10% during the forecast period.

North America 1Mbit Serial EEPROM market size was estimated at USD 216.11 million in 2023, at a CAGR of 5.23% during the forecast period of 2024 through 2032.
