Abstracts

V2 level flame retardant polypropylene is an environmentally friendly polypropylene (PP) material with phosphorus, nitrogen, and bromine as the main flame retardant elements. Its flame retardant grade is V2. These elements increase the flame retardancy through the dual flame retardant mechanism of solid phase and gas phase. Improved flame retardant efficiency. In addition, the catalytic mechanism accelerates the melting and dripping of the system, further playing a flame retardant role. Due to its excellent flame retardant properties and mechanical properties, it is especially suitable for fields that have higher requirements for flame retardant properties. It is widely used in many fields, including electronics and electrical, building materials, automobile industry, etc.
