Abstracts

V2H (Vehicle-to-Home) Home Energy System product is an innovative energy management solution that connects electric vehicles (EVs) to the home energy system through two-way charging technology, so that the energy in the Vehicle battery can power home appliances, lighting and other power systems. Thus turning the electric vehicle into a mobile energy storage unit. This system can not only provide electricity when the home needs extra energy, but also charge the vehicle when the price is low, and discharge the vehicle to the home when the price is high, so as to achieve peak and valley electricity consumption and save the cost of household electricity. In addition, the V2H system can be used as a backup power supply in the event of a power outage, ensuring the normal operation and safety of family life and providing continuous power support for the family.
