Report Overview:

All vaccines lose potency over time. As the rate of loss is temperature-dependent, the World Health Organization (WHO) recommends vaccine products be transported and stored between 2°C and 8°C. Maintaining this range from the point of manufacture to the point of administration requires a temperature-controlled supply chain or cold chain—a global distribution network of equipment and procedures for sustaining product quality (potency) during transport, storage, and delivery.

Vaccines Isothermal Boxes is an innovative insulated packaging used for the transportation of Vaccine at controlled temperatures. It efficiently preserves the products from thermal and physical shocks, and most pathogens cannot survive at sub-zero temperatures.
