Abstracts

Vaccine Management Software is an information system designed to assist with vaccination management, improving efficiency and accuracy. The software offers a variety of functions, including vaccine inventory management and real-time tracking of vaccine inflows, outflows, inventory checks, and disposals, ensuring sufficient supply and timely replenishment. It also manages vaccination records, detailing recipient information, vaccine type, dose, and time of administration for easy query and statistics. It also provides appointment management, helping recipients schedule vaccination times and locations online and automatically sending appointment and vaccination reminders to improve vaccination timeliness and accuracy. With the development of cloud computing, mobile technology, data analytics, and artificial intelligence (AI), vaccine management software will be more intelligent and efficient. Cloud-based software can provide more flexible access and data storage capabilities, while AI can be used for data analysis, predicting vaccine demand, and optimizing inventory management. Vaccines have strict requirements on storage and transportation temperature, and cold chain monitoring is crucial. Vaccine management software will integrate more with Internet of Things (IoT) devices to real-time monitor the temperature and other environmental parameters of vaccines, ensuring vaccine quality and safety, which is also an important part of reducing vaccine waste. As vaccine management involves a large amount of data, including patient information, vaccine inventory, and vaccination records, there is an increasing demand for data security, standardization, and interoperability. Software will focus more on data encryption, compliance with relevant data protection regulations, and seamless connection with other healthcare information systems to achieve more efficient data sharing and management.

The global Vaccine Management Software market size was estimated at USD 291.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
