Abstracts

Vacuum dehydration systems are industrial equipment designed to remove moisture and other volatile contaminants from various fluids, particularly oils, by subjecting them to sub-atmospheric pressure, which lowers the boiling point of water and enables its evaporation at lower temperatures without damaging the base fluid. These systems are widely used in industries such as power generation, manufacturing, marine, and renewable energy to maintain the performance and longevity of hydraulic oils, lubricants, insulating oils, and other critical fluids by preventing issues like oxidation, acid formation, and reduced dielectric strength caused by water contamination.

The global Vacuum Dehydration Systems market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
