Report Overview

Vacuum Encapsulation Laminator is innovative to attach dry film under vacuum and develop the heating air bag laminating. Vacuum / pressure / temperature & time can be independently set up in accordance with material application, and the secondary surface leveling and laminating can be expanded. Before the film is applied, the dry film to be attached shall not contact with the wafer in the cavity until the cavity is vacuumized, and the soft air bag shall be pressurized to attach the film, so as to avoid the problem of bubble or poor filling of dry film due to the way of pre film and vacuum pressing.
