Abstracts

Vacuum excavation service is a non-destructive digging method that uses high-pressure air or water to break up soil, which is then simultaneously removed by a powerful vacuum system into a debris tank, offering a safer and more precise alternative to traditional mechanical excavation by significantly reducing the risk of damaging underground utilities such as gas lines, fiber optics, electrical conduits, and water pipes. This technique is widely utilized across industries including construction, telecommunications, oil and gas, and municipal infrastructure projects, where accuracy, safety, and minimal disruption are critical operational priorities.

The global Vacuum Excavation Service market size was estimated at USD 780.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
