Abstracts

Vacuum fillers for sausages are specialized industrial or semi-industrial machines used in meat processing to efficiently fill sausage casings with precise portions of ground meat or other food mixtures while simultaneously removing air pockets; these devices typically consist of a hopper for loading the product, a vacuum pump to create negative pressure, a filling mechanism (such as a piston, auger, or vane system), and nozzle attachments for different casing sizes, ensuring improved product consistency, extended shelf life due to reduced oxygen exposure, and higher production speeds compared to non-vacuum alternatives.
