Report Overview
Vacuum filtration unit is a kind of equipment to realize solid-liquid separation driven by vacuum negative pressure. Under the action of vacuum negative pressure (0.04-0.07mpa), the liquid in the suspension is pumped away through the filter media (filter cloth), while the solid particles are intercepted by the media, so as to realize the separation of liquid and solid. The structure of the filter section is arranged along the horizontal length direction, which can continuously complete the filtration, washing, drying, filter cloth regeneration and other operations.
