Abstracts

A vacuum gauge controller is an electronic instrument used to monitor, regulate, and display vacuum pressure levels within enclosed systems, typically interfacing with various types of vacuum gauges such as Pirani, capacitance manometer, thermocouple, or ionization sensors. It processes input signals from these sensors, converts them into readable pressure units (e.g., Torr, mbar, or Pascal), and often provides output for system control?such as activating interlocks, triggering alarms, or integrating with automated processes?to maintain desired vacuum conditions. These devices are essential in applications requiring precise pressure management, including semiconductor manufacturing, research laboratories, pharmaceutical production, and vacuum coating systems, where stability, accuracy, and reliability are critical.

The global Vacuum Gauge Controller market size was estimated at USD 218.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.65% during the forecast period.
