Report Overview

A vacuum insulated panel (VIP) is a form of thermal insulation consisting of a nearly gas-tight enclosure surrounding a rigid core, from which the air has been evacuated.

Vacuum insulation panel is the thinnest insulation with the most efficient thermal insulation. They have 8 to 10 times lower thermal conductivity than other conventional insulation materials such as rigid foam boards, foam beads or fiber blankets.

The main components of a VIP are inner core, barrier envelope and getters and desiccants. The envelope could either consist of thick metal sheets or multilayer barrier of metalized polymeric layers to provide protection against environmental and handling stresses.
