Abstracts

Vacuum Jacketed Pipe (VIP) system is a type of insulation technology that is used to maintain the temperature of refrigerated or cryogenic liquids as they flow through pipes. It consists of inner and outer pipes with a vacuum-insulated space between them. The inner pipe is typically constructed from materials suitable for cryogenic temperatures, such as stainless steel or aluminum, and it carries the cryogenic fluid. Surrounding the inner pipe is an outer pipe, creating a vacuum layer between the two pipes. This vacuum space is essential for minimizing heat transfer, as it significantly reduces conduction and convection heat losses, thus maintaining the temperature of the cryogenic fluid during transportation. Key global manufacturers of Vacuum Jacketed Pipe (VIP) System include Crane, Chart Industries and BUTTING CryoTech. The top three companies have a market share of about 34 percent. North America is the world's largest Vacuum Jacketed Pipe (VIP) System market with a market share of approximately 56%, followed by Europe and China with a market share of 17% and 11%, respectively. In terms of product type, Rigid Type is the largest segment with approximately 82% market share. In terms of application, Industrial Process is the largest downstream segment, accounting for about 40% of the market.

The global Vacuum Jacketed Pipe (VIP) System market size was estimated at USD 382.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
