Abstracts

Vacuum Magnetron Sputtering Coating Equipment is a special device which uses the magnetron sputtering technology to realize the surface coating of materials in the vacuum environment. The core principle is to improve the gas ionization rate by introducing a magnetic field to restrain the plasma, so that the target atoms or ions are sputtered and deposited on the substrate surface at high speed under the action of electric field, forming a uniform and dense film layer. This technology belongs to the category of physical vapor deposition (PVD), which has the characteristics of low temperature, low damage and high deposition rate.

The global Vacuum Magnetron Sputtering Coating Equipment market size was estimated at USD 1249.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
