## Abstracts

Vacuum packed pickled mustard refers to pickled mustard that has been processed and then placed into a special packaging material. After that, the air inside the package is removed, leaving it in a near-vacuum state. This packaging form mainly utilizes the vacuum environment to extend the shelf-life of pickled mustard. Generally, plastic composite films are used as the packaging material. These films have excellent barrier properties, which can prevent the entry of external air, moisture, and other substances. At the same time, they can withstand the pressure changes during the vacuum packing process.

The global Vacuum Packed Pickled Mustard market size was estimated at USD 952.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
