## Abstracts

Vacuum interrupter also known as vacuum switch tube, is the core component of high voltage power switch. Its main function is to cut arc off through excellent insulation of vacuum in high voltage circuit and restrain current quickly to avoid accidents and danger. It is mainly used in electric power transmission and distribution control system, also used in metallurgy, mining, petroleum, chemical industry, railways, broadcasting, communications, industrial high frequency heating power distribution system. It is characterized by energy saving, material saving, fire prevention, explosion proof, small volume, long life, low maintenance cost, reliable operation and non-pollution. Vacuum interrupter can be divided into two kinds, one for circuit breakers and the other for load switch. The vacuum interrupter for circuit breaker is mainly used for substation and power grid facilities in the power sector, and vacuum interrupter for load switch is mainly used for end users of the power grid. The vacuum switch tube market is highly application-driven, with several critical uses in power distribution and transmission systems. Among these, Circuit Breakers take the largest market share, as they are an essential component in virtually all power systems, protecting circuits from overcurrent or fault conditions by breaking the circuit when necessary. The role of vacuum interrupters in circuit breakers is to ensure reliable arc quenching, preventing equipment damage and reducing operational risks. Other applications include Contactors, which are used to control the flow of electricity in power systems, Load Break Switches used for switching electrical circuits, and Reclosers, which are essential in re-establishing power after a short circuit or fault is detected. Each of these applications benefits from the use of vacuum interrupters for their reliability, safety features, and long lifespan. The demand for vacuum interrupters in these devices is driven by the increasing emphasis on efficient, safe, and automated power distribution systems.
