Value-Based Reimbursement Software is a type of software that helps healthcare providers and payers to implement and manage value-based reimbursement (VBR) models, such as pay-for-performance, bundled payments, shared savings, and capitation. VBR software enables healthcare organizations to measure and improve the quality, cost, and outcomes of care delivery, and to align their financial incentives with their performance. VBR software can provide various functions, such as data integration, analytics, reporting, contract management, risk adjustment, and payment processing. The industry trend of VBR software is expected to be positive and growing in the coming years. The main drivers for this growth are the increasing demand for VBR software in the wake of the COVID-19 pandemic, the rising need for improving the quality and efficiency of healthcare delivery, the growing adoption of VBR models by healthcare providers and payers, and the evolving regulatory and compliance requirements. The main challenges for this market are the lack of awareness and skills among VBR software users, the high cost and complexity of VBR software solutions, and the dynamic nature of cyber threats. The main opportunities for this market are the emergence of new technologies such as artificial intelligence (AI), machine learning (ML), and blockchain in VBR software solutions, the increasing integration of VBR software with other healthcare software solutions such as electronic health records (EHRs), revenue cycle management (RCM), and population health management (PHM), and the growing demand for VBR software solutions in emerging markets such as Asia-Pacific and Latin America.

The global Value-Based Reimbursement Software market size was estimated at USD 243.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
