The wind pressure of the down the hole impactor is mainly divided into two types: high wind pressure and low wind pressure. High wind pressure impactors are typically used in hard geological conditions, such as minerals, marble, and other hard materials. Their shock waves can break rock masses to a greater extent, penetrate deeper, and excavate faster. Low wind pressure impactors are suitable for relatively fragile geological conditions, such as small equipment such as wires and pipelines, with low fluctuation frequency and minimal adverse effects on underground buildings and infrastructure. The first generation impactor was a welded structure, the second generation impactor was changed to an assembled structure with a valve impactor, and the third generation was changed to a valve free structure impactor.
