Abstracts

The market for Van On Board Charger (OBC) CPUs refers to the specialized computing units integrated within the power conversion systems of electric vans, responsible for managing and regulating AC-to-DC power transfer from external charging sources to the vehicle's battery pack. These CPUs are critical components that ensure efficient, safe, and optimized charging processes, incorporating functionalities such as thermal management, communication with charging infrastructure (e.g., via ISO 15118 or CHAdeMO protocols), and adaptive power delivery based on battery state-of-charge and grid conditions. As the commercial electric van segment expands globally, driven by logistics, last-mile delivery, and sustainability initiatives, demand for advanced OBC CPUs is increasing, with requirements for higher power ratings (e.g., 11 kW to 22 kW), bidirectional capabilities (V2G/V2L), and compliance with regional standards and safety certifications. Key market dynamics include technological innovation in semiconductor materials (e.g., SiC and GaN for efficiency gains), integration with broader vehicle energy management systems, and competitive pressure from both automotive OEMs and specialized electronics suppliers aiming to deliver compact, reliable, and cost-effective solutions.

The global Van On Board Charger Cpu market size was estimated at USD 750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
