Abstracts

Since the 1930s, cryogenic detectors have dominated the development of infrared detectors. However, the requirement for low-temperature cooling in cryogenic detectors not only makes them expensive but also increases the size of the system and makes them inconvenient to use. Non-cryogenic infrared focal plane arrays (FPAs) do not require a cooling mechanism and can operate at room temperature, offering advantages such as compact size, light weight, low power consumption, long lifespan, low cost, and quick start-up. Although they are less sensitive than cryogenic infrared FPAs, the performance of non-cryogenic FPAs is sufficient to meet the technical requirements of some military equipment and the vast majority of civilian technology fields. Currently, the production volume of non-cryogenic infrared detectors far exceeds that of cryogenic detectors, mainly due to the high demand in the civilian market, as well as their ability to meet some military market needs. Non-cryogenic infrared detectors can be categorized into vanadium oxide infrared detectors and amorphous silicon infrared detectors based on different MEMS sensor materials. Vanadium oxide infrared detectors are the most widely used in the non-cryogenic domain. The infrared semiconductor material used is vanadium oxide, which has a high temperature coefficient of resistance, ranging from 2% to 3%/K. Due to the significant change in resistance with temperature, these detectors have a high sensitivity. Most companies produce everything from infrared detector chips, modules, to end products in a complete industrial chain. Furthermore, a significant portion of the infrared detector chips produced by these companies is used internally, so the vanadium oxide infrared detector chips mentioned in this paper include both products used in-house and those sold externally.

The global Vanadium Oxide Infrared Detector Chips market size was estimated at USD 1595.49 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
