Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Vanadium(IV) Oxide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global vanadium(IV) oxide production reached 57 tons, with an average selling price of US\$2,216 per kg. vanadium(IV) oxide, also known as vanadium dioxide (VO₂), is a dark blue or black crystalline powder. The valence state of vanadium is +4. It is insoluble in water but readily soluble in acids and bases. Vanadium(IV) oxide is a vanadium oxide with unique physical properties. At room temperature, it is in the monoclinic phase and behaves as an insulator. When the temperature exceeds the critical point, it rapidly transforms to the rutile structure, exhibiting metallic conductivity. A metal-insulator phase transition occurs at approximately 68°C (341K). This reversible phase transition makes it widely used in glass, optics, and ceramics, including smart windows, optical devices such as sensors and actuators, electronic components, terahertz metamaterials, lithium battery cathode materials, and energy-saving coatings. Upstream raw materials for vanadium(IV) oxide include vanadium source compounds (such as vanadium pentoxide (V₂O₅), vanadium chloride, sodium metavanadate, etc.), reducing agents, additives, carriers, inert gases, and solvents. Downstream manufacturers include smart windows, optical devices such as sensors and actuators, electronic components, terahertz metamaterials, lithium battery cathode materials, and energy-saving coatings. Because vanadium(IV) oxide is a functional and high-tech material, its gross profit margin is relatively high, potentially ranging from 25% to 60%.

The global Vanadium(IV) Oxide market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Vanadium(IV) Oxide market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
