Report Overview

Vapor Concentration Controller is a device that can control the concentration of a vaporized precursor in a gas delivery system. A precursor is a liquid or solid chemical that is used to deposit a thin film on a substrate by a process called Chemical Vapor Deposition (CVD) or Metal Organic Chemical Vapor Deposition (MOCVD). A VCC can measure the partial pressure of the precursor in the gas stream by using a Non Dispersive Infrared (NDIR) technology and adjust the total pressure by using a valve to keep the concentration constant. This can improve the stability and reproducibility of the CVD or MOCVD process.

The global Vapor Concentration Controller market size was estimated at USD 185.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
