Report Overview

Vapor corrosion inhibitor emitter is a device designed to protect enclosed metal and metal parts from the evils of rust. Vapor corrosion inhibitor emitters use a range of carriers, such as polyether foam or chipboard, to host the Vapor corrosion inhibitor emitters for use in various rust-prevention applications.

For best results, Vapor corrosion inhibitor emitters must be located in an enclosed space. When metal or metal parts and the Vapor corrosion inhibitor emitters are contained, the Vapor corrosion inhibitor emitters kick into action to create a blanket of protection on the surface of the metal that repels rust.
