## Abstracts

Vapor Corrosion Inhibitor Powder is a highly effective anti-rust product. Through the characteristics of gasification, diffusion and adsorption, it can form a protective barrier on the metal surface, effectively preventing the rust of metal products. Its working principle is that after the powder is gasified in a confined space, it is quickly adsorbed on the metal surface, especially in hard-to-reach areas such as deep holes, slender tubes and tortuous gaps, forming a dense protective film layer, thereby extending the service life of metal products?.

The global Vapor Corrosion Inhibitor Powder market size was estimated at USD 238.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
