Report Overview

VAV system was born in the United States in the 1960s. According to the changes of indoor load or indoor required parameters, it can maintain a constant supply air temperature, automatically adjust the supply air volume of air conditioning system, and make the indoor parameters meet the requirements of all air conditioning systems. VAV system consists of four basic parts: VAV terminal device (VAV box, room temperature controller), air handling and conveying equipment, air duct system (fresh air / exhaust air / supply air / return air) and automatic control system. VAV system adapts to the change of load by changing the air volume, which can be realized by special VAV terminal device.

The global Variable Air Volume (VAV) System market size was estimated at USD 11060 million in 2023 and is projected to reach USD 14262.85 million by 2030, exhibiting a CAGR of 3.70% during the forecast period.
