Abstracts

Variable flow dampers are devices designed to regulate airflow to meet evolving environmental demands in HVAC systems. By altering their opening size, these dampers precisely control the amount of air passing through ducts. Equipped with actuators, they can be operated manually, electrically, or pneumatically in response to signals from control systems like Building Management Systems (BMS). Vital for maintaining indoor temperature and humidity balance, enhancing energy efficiency, and reducing energy waste, Variable Flow Dampers play a pivotal role in office environments by reducing unnecessary cooling or heating in unoccupied areas, thereby conserving energy. Additionally, they aid in noise reduction and prevent system overload, making them indispensable components in modern buildings.

The global Variable Flow Dampers market size was estimated at USD 1217.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
