Abstracts

VFD cables are designed to reliably carry power for variable frequency drive systems. A variable frequency drive (VFD) is a type of controller that varies the frequency of the signal and voltage to control motor speed. Other common names for VFD include variable speed drive, adjustable speed drive, constant torque drive, inverter drive, and pulse width modulation (PWM) drive. VFD systems characteristically create a significant amount of electrical noise in the form of voltage spikes, reflected waves, charging currents, common-mode voltage, and RFI/EMI interference. This leads to voltages that are two to three times the source voltage. In the case of a non-VFD cable, this could result in insulation breakdown and cable failure. Non-VFD cable also allows common-mode (or stray) voltage to find its way through the motor and equipment grounds, which causes motor and equipment failure. VFD cable significantly reduces the risk associated with these issues.

The global Variable Frequency Drive Vfd Cables market size was estimated at USD 380.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
