Abstracts

A variable speed screw chiller is a type of industrial or commercial HVAC equipment designed for large-scale cooling applications, such as in office buildings, hospitals, data centers, and manufacturing facilities. It utilizes twin-screw compressors, which are driven by variable frequency drives (VFDs) to modulate compressor speed in response to real-time cooling demand, as opposed to conventional fixed-speed chillers that operate at a constant capacity. This technology enables precise temperature control, reduces energy consumption by matching output to load requirements, minimizes mechanical stress through softer starts and stops, and lowers operational costs, making it an energy-efficient solution for dynamic cooling needs in various climates and usage scenarios.

The global Variable Speed Screw Chiller market size was estimated at USD 2750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
