Abstracts

Variable valve timing(VVT)system is used in marine engines to increase the efficiency of engines to produce more power at lower rates of rotations per minute (rpm) using optimum amounts of fuel. The VVT system in marine engines gives an increase of about 5% in fuel efficiency. VVT controls the timing of the intake valves so that sufficient amount of air is taken in to burn the fuel, enabling complete combustion and higher power output. Currently, VVT systems have more concentration among high-power output engines. High-power output engines in marine boats usually tend to have more power at high rates of rpm. Hence, OEMs have started adding VVT systems to efficiently bring power to low rates of rpm.

The global Variable Valve Timing (Vvt) System In Marine Engines market size was estimated at USD 180.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
