Report Overview

As the name suggests, the main job of Varistor Arrester is to protect electrical appliances during thunderstorms. The working principle of this kind of varistor is that it is connected in parallel with the electrical appliance in the circuit. When the electrical appliance is working normally, its own resistance is very large, so it basically has no effect. When a large current flows through the circuit, the lightning protection varistor turns on instantly, causing all the current in the circuit to flow through the lightning protection varistor, thereby protecting electrical appliances. Varistor Arrester is a metal oxide semiconductor non-linear resistor element with zinc oxide as the main component. The resistor is sensitive to voltage. When the voltage reaches a certain value, the resistor turns on quickly. Because the varistor has good non-linear characteristics, large flow rate, low residual voltage level, fast action and no freewheeling, etc. It is widely used in lightning protection of electronic equipment.
