## Abstracts

Vascular disease devices are devices specially designed to treat vascular diseases, such as vascular stents, balloons and catheters, which are used to treat vascular dysfunction or venous plaques in order to restore natural blood flow. Stents are often used to treat narrow coronary arteries that provide oxygen enriched blood to the heart. The stent keeps the narrow artery open to allow enough blood to flow to the heart. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
