### Report Overview:

Vascular imaging device is an imaging device used to examine the circulation in the blood vessels of the body. The device is designed to locate a patient's optimal venipuncture site during the pre-, during-, and post-vascular access procedure. It can do this by projecting near-infrared (NIR) light which is then absorbed by blood and reflected by the surrounding tissue. Also can use other methods. What this gives the operator is an accurate image of a patient's blood pattern.
