Report Overview:

Increasing public awareness about the health consequences of consuming animal products as well as ethical issues surrounding animal agriculture is gradually leading to an increase in mainstream popularity of veganism which is driving the market growth in the forecasted period. The leaders in the market are launching unique products to satisfy the demands of consumers around the world. These products are similar to canned tuna in taste and texture while combining ingredients that offer an overload of health benefits. Vegan tuna contains a lot of fiber, which is useful for improving digestion and preventing obesity and cardiovascular disease. . The Industry is working on developing a texture that is flaky and has a fishy flavor without overwhelming the senses. As a result of consumer preferences changing more and more restaurants and major food chains are offering vegan foods to their customers. As soy and peas are the prime sources of vegan tuna and they are rich in protein and also give the texture of tuna. A soy allergy can cause hyperactivity of the immune system and even lead to anaphylaxis. An increasing number of people are allergic to soy and peas, which is hindering the market growth of the Industry and making it more challenging for manufacturers to manufacture allergen-free vegan tuna. Due to an increase in diseases related to birds and swine, the use of vegan tuna has increased in recent years. A decline in the demand for non-vegetarian meals and consistently a rise in the demand for vegan products have been shown. By attracting consumers' attention to the vegan tuna market and using the market budget to leverage this opportunity, vegan tuna manufacturers may be able to take advantage of this opportunity in the forecasted period. Consumers' interest in the vegan product is driving the market growth and manufacturers have to maintain high nutritional values without compromising the taste or texture. Determining proper salt and sugar proportions for vegan tunas, considering

several health concerns, which is a challenge for manufacturers and high prices of the product will further limit the market growth.

The Global Vegan Tuna Market Size was estimated at USD 164.33 million in 2023 and is projected to reach USD 227.88 million by 2029, exhibiting a CAGR of 5.60% during the forecast period.
