### Report Overview

Air pumps are also called air suspension air pumps, chassis lift air pumps, and shock absorber air pumps. When the vehicle is raised, the shock absorber air pump motor works to drive the piston to work, the piston sucks the air from the outside to the inside and compresses it. After the compression is completed, it is dried by the dryer and discharged to the distribution valve through the main air channel. The four holes after the distribution valve work are respectively sent to the four shock absorbers, and the vehicle body is raised.

The global Vehicle Air Suspension Pump And Motor market size was estimated at USD 152.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
