Abstracts

The vehicle center stack, in any vehicle, refers to the portion that has the controls and buttons and is primarily placed or mounted in the center of the automobile, near the driver's seat. The global automotive center stack market is expected to witness a healthy growth over the forecast period. Surge in demand for automobiles is expected to contribute towards the industry growth. Emergence of by-wire technology is anticipated to cater the growing demand over the next seven years. This trend is projected to unlock new design itineraries in the center stack panel when the traditional mechanical coupling of the gear and gear shifter is substituted in the vehicle. Implementing drive by-wire technology requires high level testing in order to prevent system failure or malfunctioning. It is a computer controlled system, and may witness increased adoption owing to the safety aspect associated with the same. Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively.
