Report Overview

CNG Tank/Cylinder is made using the cylinder shape with a semi-spherical shape covering each end. The cylinder and semi-spherical shapes provide the strongest structural shape because the circular and spherical shapes provide for equal distribution of stresses throughout the inner area of the tank producing the highest safety available for high-pressure vessels.

CNG Tank/Cylinder is made using the cylinder shape with a semi-spherical shape covering each end. The cylinder and semi-spherical shapes provide the strongest structural shape because the circular and spherical shapes provide for equal distribution of stresses throughout the inner area of the tank producing the highest safety available for high-pressure vessels.

The CNG Tank/Cylinder industry is not highly concentrated, there are more than one hundred manufacturers in the world, and high-end products mainly come from North America and Western Europe. Limited refueling infrastructures, and higher prices of composite cylinders, are some of the factors that hinder the growth of the CNG tanks/cylinders. Rising price of raw materials such as metals, glass fiber, carbon fiber, and other components used in manufacturing of CNG tanks/cylinders are the few challenges inhibiting the growth of the CNG tanks/cylinders market.
