Report Overview:

This report mainly studies vehicle control arm market. Control arm is a piece of a vehicle's suspension, it is a hinged suspension link between the chassis and the suspension upright or hub that carries the wheel. A vehicle's suspension is a complexity of geometry and leverage. The front suspensions in most vehicles manufactured today not only steer the vehicle, but also drive the vehicle. Front-wheel drive designs rely on a control arm to counteract the engine's torque. By placing an engine torque limiter arm between the engine and the vehicle's chassis, the vehicle is able to be easily steered while applying power to the engine. Without this arm, the vehicle would be nearly impossible to steer when a driver applies power to the wheels.

The Global Vehicle Control Arm Market Size was estimated at USD 2392.02 million in 2023 and is projected to reach USD 2509.16 million by 2029, exhibiting a CAGR of 0.80% during the forecast period.
