## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Vehicle-mounted Satellite Positioning Terminal competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Vehicle-mounted Satellite Positioning Terminal will reach 1.8012 million units, with an average selling price of US\$195,428 per unit. Vehicle-mounted satellite mobile communication terminals enable in-vehicle satellite communication, providing two-way satellite messaging and call services. These terminals can handle phone calls and text messages in areas without terrestrial networks, such as deserts and mountainous areas. With the development of automotive products and the diversification of user scenarios, cars are no longer simply a means of transportation; they are now a vehicle for diverse lifestyles and intelligent services. The application of satellites in vehicles may hold even greater promise than that of mobile phones. Cars offer inherent advantages in the implementation of satellite communication technology. For example, they have fewer battery-powered devices, offer longer battery life, and can receive satellite signals from a larger area, enabling faster and better reception even in harsh communication environments. Furthermore, in-vehicle satellite communication has a wide range of applications in the automotive industry, encompassing commercial vehicles (such as trucks and buses), passenger cars, military vehicles, and industrial vehicles.

The global Vehicle-mounted Satellite Positioning Terminal market size was estimated at USD 352.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.40% during the forecast period.
